London, UK

Professional Experience

TixTrack, London (UK)

Senior Front End Engineer

Front End Engineer

October 2024 – October 2025

June 2022 - October 2024

- International ticketing solutions for live events and museums - primarily for Broadway NYC and London's West End theatres.
- Technical responsibilities include:
 - Increasing adoption of an in-house design system across multiple front end and full-stack teams, and championing its benefits to non-technical stakeholders.
 - Migrating and extending an existing legacy Angular architecture by building a Vue 3 app from the ground up to empower the organisation to sign contracts with Nederlander Organization and Delfont Mackintosh theatres throughout the US and UK respectively.
 - Delivering a full checkout rebuild that allowed the organisation to sign an exclusive contract with Stripe that vastly increased revenue per sale and allowed integration with multiple new payment methods.
 - Transforming complex SVGs into interactive seat maps using D3 for admin data visualisation and consumer-facing checkout contexts.
 - Being a UI/UX specialist between the design and engineering teams to build and maintain an accessible and well-tested component library and internal CSS framework using Storybook.
 - Being a key front end voice in the company's architecture cohort - tasked with migrating a 10-year-old monolith into a Turborepo-powered monorepo. Involves decoupling multiple front end projects and libraries for internal cross-team use into a single deployment pipeline.
 - Proposing and leading a testing initiative to introduce end-to-end, component, and unit testing to the Vue codebase using Cypress and Vitest.
 - Working as the build tool specialist on the Front End team taking ownership of tools such as Vite and Sentry to strategically employ techniques such as lazy-loading and tree-shaking.
- Worked alongside DevOps specialists to move the company to CI/CD, working in a 'release captain' capacity to own delivery and raise QA ownership. Successfully helped transition the team from releasing every 3 months to multiple times an hour whilst remaining the company's individual contributor.
- Advocating for universal accessibility, tasked with meeting a self-launched company-wide initiative to meet WCAG 2.2 requirements.
- Mentoring and empowering Full-Stack and Front End developers via daily training and consistent knowledge share.
- Consistently had the most Pull Requests, commits, and story points over a 3 year span, second only to the CTO as the most prolific contributor in the companies 10 year history.

Red Snapper, London (UK)

Junior Front End Web Developer

October 2021 - June 2022

- London-based web design and development agency offering web implementations and consultancy for a variety of clients, including the BBC and British Medical Journal.
 - Equal division between building statically generated microsites with Nuxt or Astro and delivering Vue 3 front ends. Daily use of SCSS to deliver responsive “pixel-perfect” designs and GSAP for complex animations.
-

Education

Birkbeck, University of London

MSc, Computer Science - Distinction

September 2020 - September 2021

London South Bank University

BA, Music and Sonic Media - 2:1

September 2010 - June 2013
